Environment Canada, "Backgrounder: Randle Reef Contaminated Sediment Remediation Project," 2012-12-18. "With an investment of \$46.3 million, the Government of Canada is taking action to clean up one of the largest and most contaminated sites within the Canadian side of the Great Lakes—Randle Reef in Hamilton Harbour."
<http://www.ec.gc.ca/default.asp?lang=En&n=56D4043B-1&news=600F9796-959C-4A1D-A35B-CBFA85AF16FD>

Environment Canada, "News Release: Environment Canada and Hamilton Port Authority Launch Randle Reef Test Project," 2012-12-10. "Environment Canada and the Hamilton Port Authority are launching a structural test project that will provide further information to help in the development of the proposed Randle Reef sediment remediation project. The test project will involve pile driving on Randle Reef in order to confirm engineering design details. The resulting information will be incorporated into future engineering specifications for the construction stage of the proposed sediment remediation project at Randle Reef.... 'The clean-up of Randle Reef is important for the future of this community and reflects the Government of Canada's commitment to clean water for Canadians,' said Canada's Environment Minister, the Honourable Peter Kent. 'This test project is a significant step in moving the proposed Randle Reef sediment remediation project forward.'"
